CHALLENGES IN DWH TESTING

What type of challenges you have faced in your projects?

1) Volumes of data, from heterogeneous source.
It was very challenging for me to test volumes of data, that data is coming from different sources.

2 Data quality not assured at source
Whatever the data is coming from source table that is was not loaded in proper manner.

3 Complexity of Business logic.
while testing the data i have applied so many join conditions, subqueries etc bcz data was coming from different sources.

4 UnAvailability of Required test data

5) No proper documents available.
